Raw Sequence Listing Error Summary

OR DETECTED

SUGGESTED CORRECTION

SERIAL NUMBER: 09/674,368A

NEW RULES CASES: PLEASE DISREGARD ENGLISH "ALPHA" HEADERS, WHICH WERE INSERTED BY PTO SOFTWARE

Wrapped Nucleics Wrapped Aminos	The number/text at the end of each line "wrapped" down to the next line. This may occur if your file was retrieved in a word processor after creating it. Please adjust your right margin to .3; this will prevent "wrapping."
Invalid Line Length	The rules require that a line not exceed 72 characters in length. This includes white spaces.
Misaligned Amino Numbering	The numbering under each 5 th amino acid is misaligned. Do not use tab codes between numbers; use space characters, instead.
Non-ASCII	The submitted file was not saved in ASCII(DOS) text, as required by the Sequence Rules. Please ensure your subsequent submission is saved in ASCII text.
Variable Length	Sequence(s) _____ contain n's or Xaa's representing more than one residue. Per Sequence Rules, each n or Xaa can only represent a single residue. Please present the maximum number of each residue having variable length and indicate in the <220>-<223> section that some may be missing.
PatentIn 2.0 "bug"	A "bug" in PatentIn version 2.0 has caused the <220>-<223> section to be missing from amino acid sequences(s) <u>2,4</u> . Normally, PatentIn would automatically generate this section from the previously coded nucleic acid sequence. Please manually copy the relevant <220>-<223> section to the subsequent amino acid sequence. This applies to the mandatory <220>-<223> sections for Artificial or Unknown sequences.
Skipped Sequences (OLD RULES)	Sequence(s) _____ missing. If intentional, please insert the following lines for each skipped sequence: (2) INFORMATION FOR SEQ ID NO:X: (insert SEQ ID NO where "X" is shown) (i) SEQUENCE CHARACTERISTICS: (Do not insert any subheadings under this heading) (xi) SEQUENCE DESCRIPTION:SEQ ID NO:X: (insert SEQ ID NO where "X" is shown) This sequence is intentionally skipped Please also adjust the "(ii) NUMBER OF SEQUENCES:" response to include the skipped sequences.
Skipped Sequences (NEW RULES)	Sequence(s) _____ missing. If intentional, please insert the following lines for each skipped sequence. <210> sequence id number <400> sequence id number 000
Use of n's or Xaa's (NEW RULES)	Use of n's and/or Xaa's have been detected in the Sequence Listing. Per 1.823 of Sequence Rules, use of <220>-<223> is MANDATORY if n's or Xaa's are present. In <220> to <223> section, please explain location of n or Xaa; and which residue n or Xaa represents.
Invalid <213> Response	Per 1.823 of Sequence Rules, the only valid <213> responses are: Unknown, Artificial Sequence, or scientific name (Genus/species). <220>-<223> section is required when <213> response is Unknown or is Artificial Sequence
Use of <220>	Sequence(s) _____ missing the <220> "Feature" and associated numeric identifiers and responses. Use of <220> to <223> is MANDATORY if <213> "Organism" response is "Artificial Sequence" or "Unknown." Please explain source of genetic material in <220> to <223> section. (See "Federal Register," 06/01/1998, Vol. 63, No. 104, pp. 29631-32) (Sec. 1.823 of Sequence Rules)
PatentIn 2.0 "bug"	Please do not use "Copy to Disk" function of PatentIn version 2.0. This causes a corrupted file, resulting in missing mandatory numeric identifiers and responses (as indicated on raw sequence listing). Instead, please use "File Manager" or any other manual means to copy file to floppy disk.
Misuse of n	n can only be used to represent a single nucleotide in a nucleic acid sequence. It is not used to represent any value not specifically a nucleotide.

Re: U.S. Application No. ACY-33377-00
Serial No. 09/674368
Assignee: American Cyanamid Company
Inventors: Metcalf et al.
Title: Vaccines Containing Recombinant Pilin Against Neisseria Gonorrhoeae

Dear Mr. Sparr:

I am writing this letter, pursuant to our telephone conversation of April 24, 2002, to request you to make a determination as to whether, based on the facts set out below, the Patent Office (the "Office") would be willing to withdraw the holding of abandonment in the above-identified application and provide the Applicants with an extension of time to respond to the "Notification of Defective Response."

STATEMENT OF MATERIAL FACTS AND REASONS FOR GRANTING RELIEF

The above-identified application (U.S. serial No. 09/674368) was filed as a "National Stage" application under 35 U.S.C. §371 on October 27, 2000, from a PCT application, International Application Number PCT/US99/09486, filed on April 29, 1999, and claims priority from U.S. Provisional Application No. 60/083,405 filed April 29, 1998.

The application as filed contained a sequence listing both in a computer readable form and as a paper copy, which was generated using PatentIn Version 2.0.

On June 11, 2001, the Office mailed a "Notification to Comply with Requirements for Patent Application Containing Nucleotide Sequences and/or Amino Acid Disclosures" (the "Notification"), wherein the Office stated that the "computer readable form that had been filed with this application has been found to be damaged and/or unreadable" and requested the Applicants to submit a substitute computer readable sequence listing as required under 37 C.F.R. §§ 1.821 - 1.825. Specifically, in the Raw Sequence Listing Error Report (the "Report") mailed with the Notification the following errors were identified:

- (1) The number/text at the end of each line wrapped down to the next line; and
- (2) The file was not saved in ASC II (DOS) text as required by the sequence rules. (see Exhibit 1).

The report further cautioned the Applicants not to use the "copy to disk" function of the PatentIn Version 2.0 as a "bug" in the software would cause a corrupted file resulting in missing mandatory numeric identifiers and responses.

On December 12, 2001, the Applicants filed a response to the "Notification" with a petition for extension of time and fees. Along with the response, the Applicants submitted a substitute computer readable form and a paper copy of the sequence listing wherein the Applicants corrected the errors that were identified in the Report, together with a statement as required under 37 C.F.R. §§ 1.825. In generating the computer readable form of the sequence listing, wherein the errors identified in the Report were corrected, the Applicants used PatentIn Version 3.0 and the "Sequence Checker" function of Version 3.0.

On March 18, 2002, the Office mailed a "Notification of Defective Response" and set a "time limit of one month from the date of this Notification or the Notice of Missing Requirements, whichever is longer." The only error identified in the Raw Sequence Listing Error Summary Report that was sent with the Notification of Defective Response was an error caused by a "bug" in PatentIn Version 2.0, which caused sections <220> through <223> to be missing from amino acid sequences 2 and 4. (see Exhibit 2). The Report in paragraph 6

further stated that, “[n]ormally, PatentIn would automatically generate this section from the previously coded nucleic acid sequence,” and that the only way to rectify this error is to “manually copy the relevant <220> <223> section to the subsequent amino acid sequence.”

The Applicants respectfully submit that the Applicants followed the suggestions of the Office in generating a substitute computer readable form of the sequence listing in responding to the Notification of July 11, 2001. The Applicants submit that due to software incompatibility between PatentIn Version 2.0 and the Version 3.0, the software failed to automatically generate sections <220> through <223> in the amino acid sequences 2 and 4. Furthermore, since the March 18, 2002 suggestion to manually copy the relevant sections <220> through <223> from the nucleic acid sequence 1 and 3 into the amino acid sequences 2 and 4 was not made in the “Raw Sequence Listing Error Report” mailed with the “Notification” of July 11, 2001, the Applicants were unaware that the missing mandatory sections needed to be corrected.

In view of the above, the Applicants respectfully request that the Office withdraw the holding of abandonment. The Applicants further request that the Applicants be granted an extension of time to file a response to the “Notification of Defective Response” together with a substitute computer readable form of the sequence listing.

CONCLUSION

In view of the material facts set forth above, the Applicants respectfully request that the holding of abandonment be withdrawn, and the Applicants be granted relief to submit a substitute corrected computer readable form of the sequence listing.

Should you need to contact me or need any additional information, please do not hesitate to call me at #(845) 602-2189.

TO REDUCE ERRORED SEQUENCE LISTINGS, PLEASE USE THE CHECKER VERSION 3.0 PROGRAM, ACCESSIBLE THROUGH THE U.S. PATENT AND TRADEMARK OFFICE WEBSITE. SEE BELOW.

Checker Version 3.0

The Checker Version 3.0 application is a state-of-the-art Windows based software program employing a logical and intuitive user-interface to check whether a sequence listing is in compliance with format and content rules. Checker Version 3.0 works for sequence listings generated for the original version of 37 CFR §§1.821 - 1.825 effective October 1, 1990 (old rules) and the revised version (new rules) effective July 1, 1998 as well as World Intellectual Property Organization (WIPO) Standard ST.25.

Checker Version 3.0 replaces the previous DOS-based version of Checker, and is Y2K-compliant. Checker allows public users to check sequence listings in Computer Readable form (CRF) before submitting them to the United States Patent and Trademark Office (USPTO). Use of Checker prior to filing the sequence listing is expected to result in fewer errored sequence listings, thus saving time and money.

ATTN: NEW RULES CASES: PLEASE DISREGARD ENGLISH "ALPHA" HEADERS, WHICH WERE INSERTED BY PTO SOFTWARE

- 1 ☒ 1 1 Wrapped Nucleics The number/text at the end of each line "wrapped" down to the next line.
This may occur if your file was retrieved in a word processor after creating it.
Please adjust your right margin to .3, as this will prevent "wrapping".
- 2 ☐ 2 2 Wrapped Aminos The amino acid number/text at the end of each line "wrapped" down to the next line.
This may occur if your file was retrieved in a word processor after creating it.
Please adjust your right margin to .3, as this will prevent "wrapping".
- 3 ☐ 3 3 Incorrect Line Length The rules require that a line not exceed 72 characters in length. This includes spaces.
- 4 ☐ 4 4 Misaligned Amino Acid Numbering The numbering under each 5th amino acid is misaligned. This may be caused by the use of tabs between the numbering. It is recommended to delete any tabs and use spacing between the numbers.
- 5 ☒ 5 5 Non-ASCII This file was not saved in ASCII (DOS) text, as required by the Sequence Rules.
Please ensure your subsequent submission is saved in ASCII text so that it can be processed.
- 6 ☐ 6 6 Variable Length Sequence(s) 6 contain n's or Xaa's which represented more than one residue.
As per the rules, each n or Xaa can only represent a single residue.
Please present the maximum number of each residue having variable length and indicate in the (ix) feature section that some may be missing.
- 7 ☐ 7 7 PatentIn ver. 2.0 "bug" A "bug" in PatentIn version 2.0 has caused the <220>-<223> section to be missing from amino acid sequence(s) 7. Normally, PatentIn would automatically generate this section from the previously coded nucleic acid sequence. Please manually copy the relevant <220>-<223> section to the subsequent amino acid sequence. This applies primarily to the mandatory <220>-<223> sections for Artificial or Unknown sequences.
- 8 ☐ 8 8 Skipped Sequences (OLD RULES) Sequence(s) 8 missing. If intentional, please use the following format for each skipped sequence:
(2) INFORMATION FOR SEQ ID NO:X:
(i) SEQUENCE CHARACTERISTICS: (Do not insert any headings under "SEQUENCE CHARACTERISTICS")
(xi) SEQUENCE DESCRIPTION: SEQ ID NO:X:
This sequence is intentionally skipped

Please also adjust the "(iii) NUMBER OF SEQUENCES:" response to include the skipped sequence(s).
- 9 ☐ 9 9 Skipped Sequences (NEW RULES) Sequence(s) 9 missing. If intentional, please use the following format for each skipped sequence.
<210> sequence id number
<400> sequence id number
000
- 10 ☐ 10 10 Use of n's or Xaa's (NEW RULES) Use of n's and/or Xaa's have been detected in the Sequence Listing.
Use of <220> to <223> is MANDATORY if n's or Xaa's are present.
In <220> to <223> section, please explain location of n or Xaa, and which residue n or Xaa represents.
- 11 ☐ 11 11 Use of <213> Organism (NEW RULES) Sequence(s) 11 are missing this mandatory field or its response.
- 12 ☐ 12 12 Use of <220> Feature (NEW RULES) Sequence(s) 12 are missing the <220> Feature and associated headings.
Use of <220> to <223> is MANDATORY if <213> ORGANISM is "Artificial" or "Unknown".
Please explain source of genetic material in <220> to <223> section.
(See "Federal Register," 6/01/98, Vol. 63, No. 104, pp. 29631-32) (Sec. 1.823 of new Rule)
- 13 ☒ 13 13 PatentIn ver. 2.0 "bug" Please do not use "Copy to Disk" function of PatentIn version 2.0. This causes a corrupted file resulting in missing mandatory numeric identifiers and responses (as indicated on this sequence listing).

Raw Sequence Listing Error Summary

ERROR DETECTED

SUGGESTED CORRECTION

SERIAL NUMBER: 09/674,368A

ATTN: NEW RULES CASES: PLEASE DISREGARD ENGLISH "ALPHA" HEADERS, WHICH WERE INSERTED BY PTO SOFTWARE

- ☐ Wrapped Nucleics
Wrapped Aminos The number/text at the end of each line "wrapped" down to the next line. This may occur if your file was retrieved in a word processor after creating it. Please adjust your right margin to 3; this will prevent "wrapping."
- ☐ Invalid Line Length The rules require that a line not exceed 72 characters in length. This includes white spaces.
- ☐ Misaligned Amino Numbering The numbering under each 5th amino acid is misaligned. Do not use tab codes between numbers; use space characters, instead.
- ☐ Non-ASCII The submitted file was not saved in ASCII(DOS) text, as required by the Sequence Rules. Please ensure your subsequent submission is saved in ASCII text.
- ☒ Variable Length Sequence(s) _____ contain n's or Xaa's representing more than one residue. Per Sequence Rules, each n or Xaa can only represent a single residue. Please present the maximum number of each residue having variable length and indicate in the <220>-<223> section that some may be missing.
- ☒ PatentIn 2.0 "bug" A "bug" in PatentIn version 2.0 has caused the <220>-<223> section to be missing from amino acid sequences(s) 2,4. Normally, PatentIn would automatically generate this section from the previously coded nucleic acid sequence. Please manually copy the relevant <220>-<223> section to the subsequent amino acid sequence. This applies to the mandatory <220>-<223> sections for Artificial or Unknown sequences.
- ☐ Skipped Sequences (OLD RULES) Sequence(s) _____ missing. If intentional, please insert the following lines for each skipped sequence:
(2) INFORMATION FOR SEQ ID NO:X: (insert SEQ ID NO where "X" is shown)
(i) SEQUENCE CHARACTERISTICS: (Do not insert any subheadings under this heading)
(xi) SEQUENCE DESCRIPTION:SEQ ID NO:X: (insert SEQ ID NO where "X" is shown)
This sequence is intentionally skipped.

Please also adjust the "(ii) NUMBER OF SEQUENCES:" response to include the skipped sequences.
- ☐ Skipped Sequences (NEW RULES) Sequence(s) _____ missing. If intentional, please insert the following lines for each skipped sequence.
<210> sequence id number
<400> sequence id number
000
- ☐ Use of n's or Xaa's (NEW RULES) Use of n's and/or Xaa's have been detected in the Sequence Listing.
Per 1.823 of Sequence Rules, use of <220>-<223> is MANDATORY if n's or Xaa's are present. In <220> to <223> section, please explain location of n or Xaa, and which residue n or Xaa represents.
- ☐ Invalid <213> Response Per 1.823 of Sequence Rules, the only valid <213> responses are: Unknown, Artificial Sequence, or scientific name (Genus/species). <220>-<223> section is required when <213> response is Unknown or is Artificial Sequence.
- ☐ Use of <220> Sequence(s) _____ missing the <220> "Feature" and associated numeric identifiers and responses. Use of <220> to <223> is MANDATORY if <213> "Organism" response is "Artificial Sequence" or "Unknown." Please explain source of genetic material in <220> to <223> section.
(See "Federal Register," 06/01/1998, Vol. 63, No. 104, pp. 29631-32) (Sec. 1.823 of Sequence Rules)
- ☐ PatentIn 2.0 "bug" Please do not use "Copy to Disk" function of PatentIn version 2.0. This causes a corrupted file, resulting in missing mandatory numeric identifiers and responses (as indicated on raw sequence listing). Instead, please use "File Manager" or any other manual means to copy file to floppy disk.
- ☐ Misuse of n n can only be used to represent a single nucleotide in a nucleic acid sequence. It is not used to represent any value not specifically a nucleotide.
